

COVID-19 Specimen Data Processing:
compile_components_code.R

Libraries Needed:
library(tidyverse)
library(lubridate)

Overview: This code file pulls in the compiled components files from manifests, plate maps, and sequencing programs and merges them together, to create a usable complete dataset.

The plate map file is our "truth" (i.e. we only care about samples that show up on this file. If samples are in other compiled files but not in this one, then we will ignore those)
